Mr. Praveen

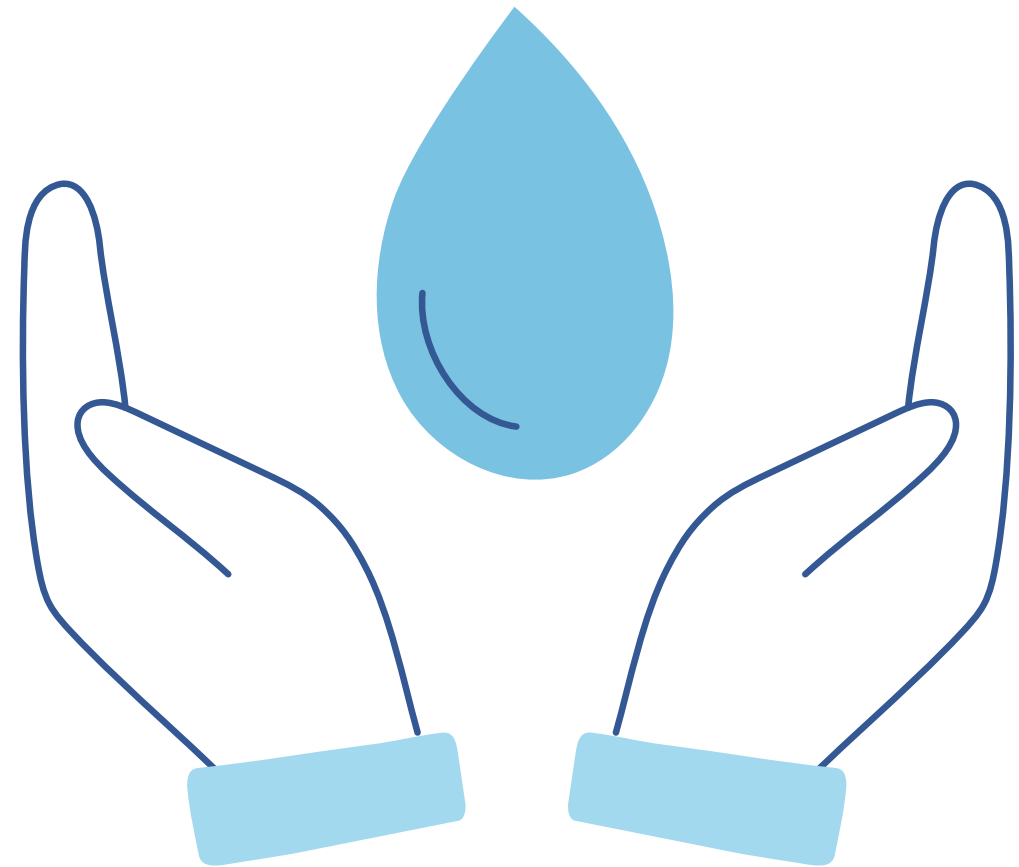

INTRODUCTION

Water is essential for good health and proper body functioning. Students need enough water during the day to stay active, focused and healthy. However, water intake can be different from student to student. This study looks at the daily water intake and hydration status of 20 students. The data also includes their age group, gender and usual activity/time.

OBJECTIVES

- To study the daily water intake of students.
- To understand the hydration status of the students.
- To compare water intake with hydration status.
- To identify students with lower water intake.
- To observe general patterns in the collected data.

METHODOLOGY

- Sample size: 20 students
- Age groups: 17–19 years and 19–22 years
- Gender: Male, Female and Other
- The collected data was arranged in a table.
- The data was then analysed using frequency counts and graphs.

Data collected:

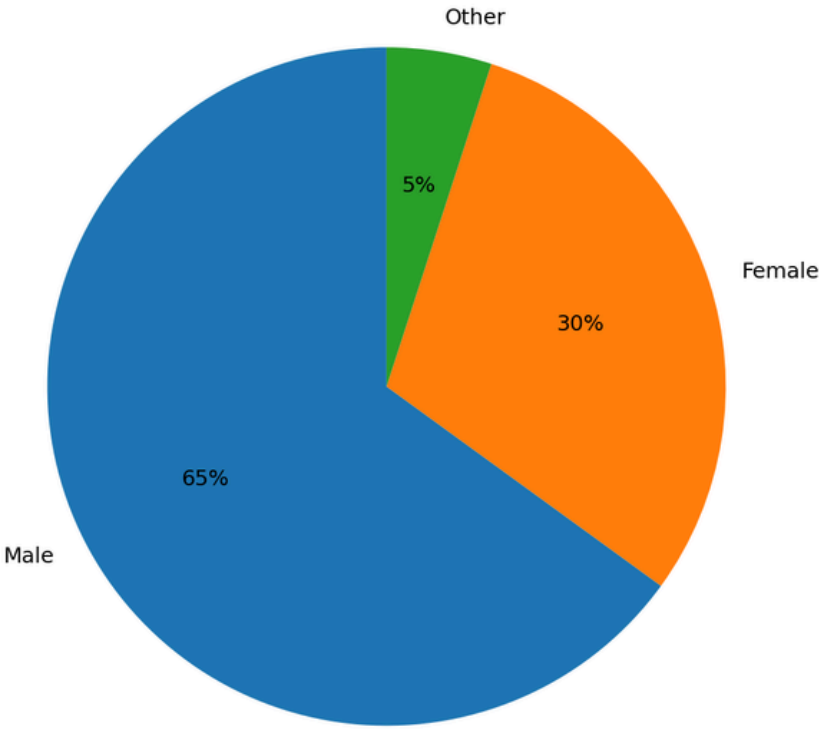

- Age group
 - Gender
 - Daily water intake
 - Usual time/activity
 - Hydration status
- Water intake categories:
 - 1–2 L, 2–3 L, 3–4 L, 4–5 L and 5–6 L.

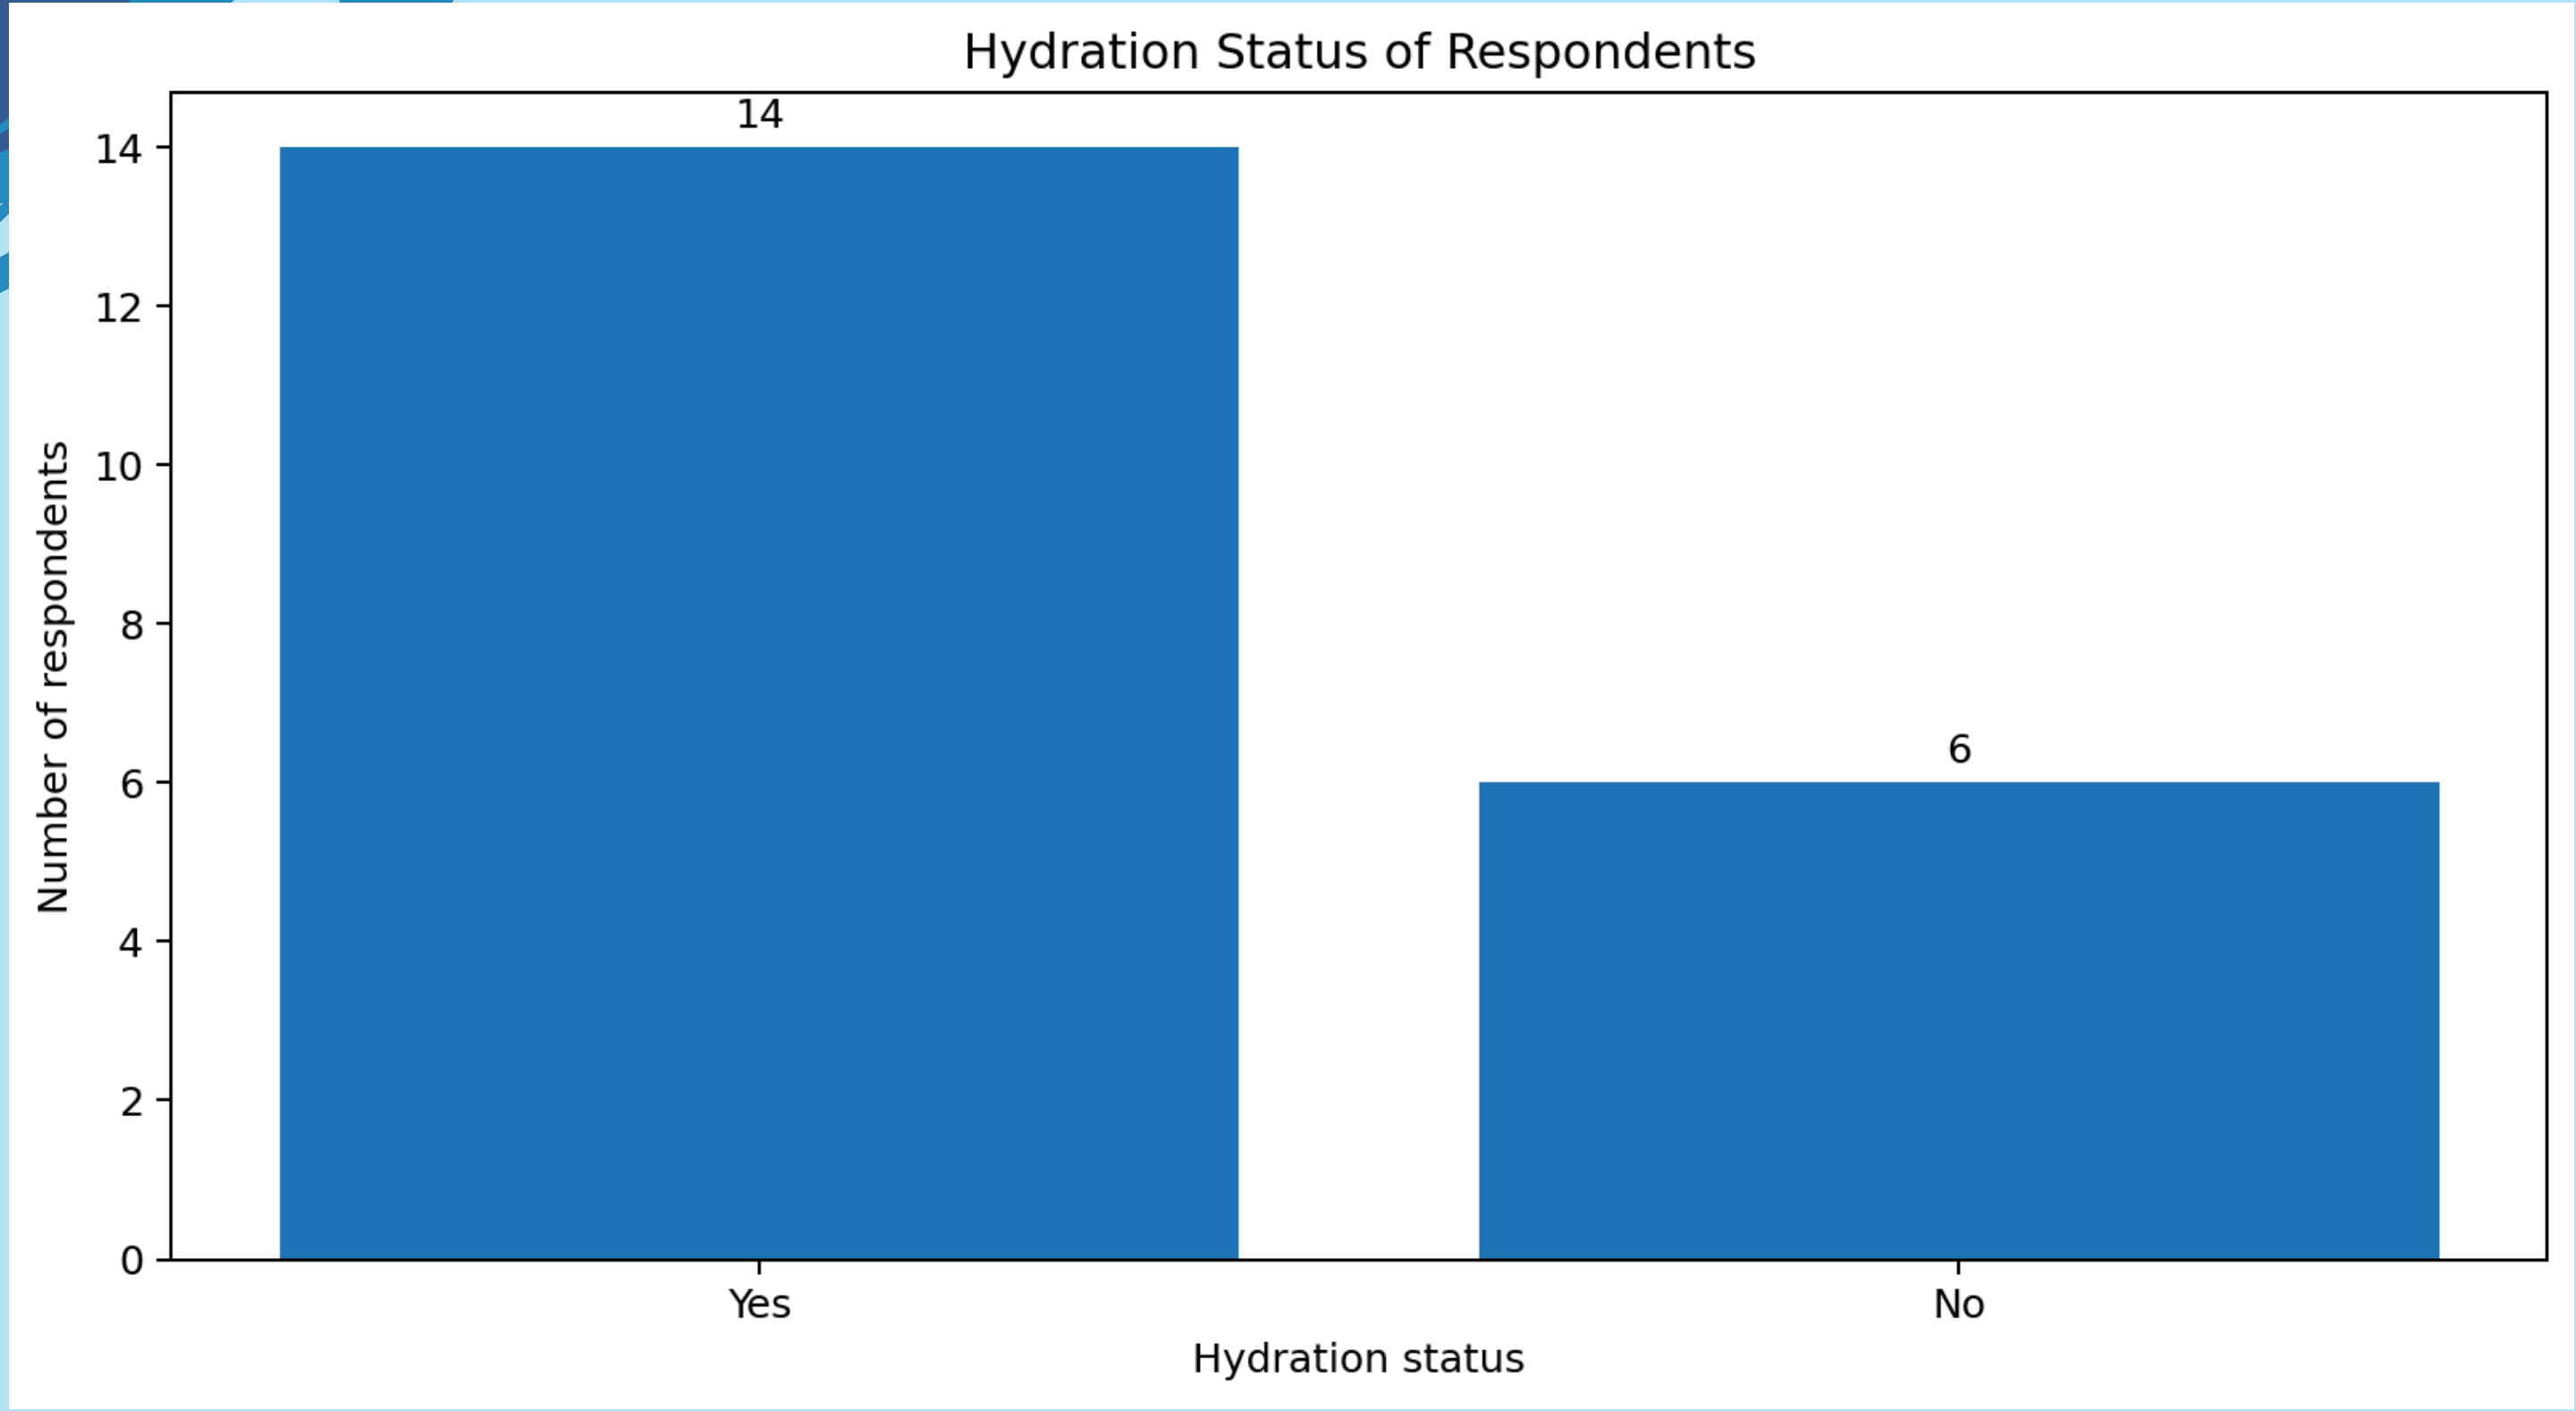

CHARTS AND VISUALIZATION

Diviyam	17-19	M	4-5L	Normal time	HYDRATE	No
Gunjan	17-19	F	2-3L	Normal time	HYDRATE	Yes
Kalpna	17-19	F	2-3L	Normal time	HYDRATE	Yes
Cheenu	17-19	F	2-3L	Normal time	HYDRATE	Yes
Taheer	17-19	M	2-3L	Normal time	HYDRATE	Yes
Ankit	17-19	M	3-4L	Normal time	HYDRATE	Yes
Ishu	17-19	F	2-3L	Normal time	HYDRATE	Yes
Deepak	17-19	M	4-5L	Normal time	HYDRATE	Yes
Pawan	17-19	M	4-5L	Normal time	HYDRATE	Yes
Chandra prakash	17-19	M	5-6L	Normal time	HYDRATE	Yes
Lovejeet	17-19	M	3-4L	Normal time	HYDRATE	Yes
Wish	19-22	Other	4-5L	Normal time	HYDRATE	Yes
Sudheer	19-22	M	2-3L	Normal time	HYDRATE	No
Ganesh choudhary	17-19	M	2-3L	Normal time	HYDRATE	No
Aftab	19-22	M	2-3L	Normal time	HYDRATE	No
Yasir	19-22	M	3-4L	Normal time	HYDRATE	Yes
snourabh	17-19	M	4-5L	Study time (for concentancy)	HYDRATE	Yes
Prakash	17-19	M	4-5L	Playing time	HYDRATE	Yes
Taranum	17-19	F	1-2L	Normal time	HYDRATE	No
Sanskriti	17-19	F	1-2L	Normal time	HYDRATE	No

Gender Distribution of Respondents

The graph shows that 70% of the students were hydrated, while 30% were not hydrated. Overall, most students had a hydrated status, but some students may need to pay more attention to their water intake.”

FINDINGS

- 65% OF STUDENTS WERE RECORDED AS HYDRATED.
- 35% OF STUDENTS WERE RECORDED AS NOT HYDRATED.
- THE MOST COMMON WATER INTAKE WAS 2–3 L PER DAY.
- 8 STUDENTS WERE IN THE 2–3 L CATEGORY.
- 6 STUDENTS REPORTED DRINKING 4–5 L.
- ONLY 2 STUDENTS REPORTED DRINKING 1–2 L.
- THE DATA SHOWS THAT STUDENTS WITH HIGHER WATER INTAKE WERE GENERALLY MORE LIKELY TO BE RECORDED AS HYDRATED.

INTERPRETATION

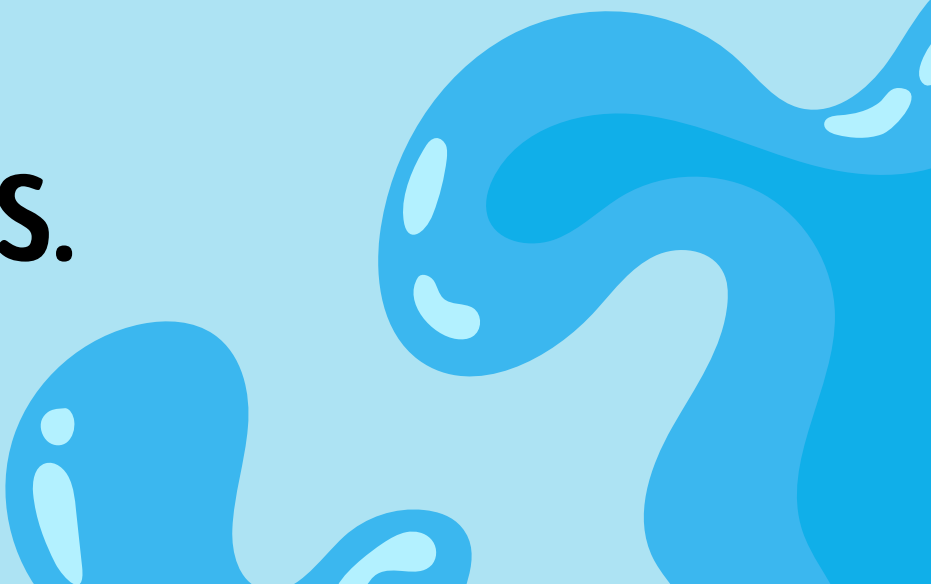

Overall, the data suggests that water intake is related to hydration status. Students with lower water intake were more commonly recorded as not hydrated. However, hydration cannot be judged only by the amount of water consumed, as many other factors can affect hydration.

MY INDIVIDUAL CONTRIBUTION

I CONTRIBUTED TO THE PROJECT BY:

- **UNDERSTANDING AND ORGANIZING THE COLLECTED DATA.**
 - **CHECKING THE WATER INTAKE OF INDIVIDUAL STUDENTS.**
 - **CATEGORISING STUDENTS ACCORDING TO THEIR WATER INTAKE.**
 - **ANALYSING THE HYDRATION STATUS.**
 - **PREPARING THE GRAPHS AND TABLES.**
 - **IDENTIFYING IMPORTANT OBSERVATIONS AND FINDINGS.**
 - **HELPING PREPARE THE FINAL PRESENTATION.**
- 
- 

APPENDICES

Appendix 1: Original data table of students

Appendix 2: Water intake frequency table

Appendix 3: Hydration status calculation

Appendix 4: Graphs used for data analysis

Appendix Data

TOTAL STUDENTS = 20

1–2 L → 2 STUDENTS

2–3 L → 8 STUDENTS

3–4 L → 3 STUDENTS

4–5 L → 6 STUDENTS

5–6 L → 1 STUDENT

HYDRATION:

YES → 13 STUDENTS (65%)

NO → 7 STUDENTS (35%)

Thankyou
