INTRODUCTION

1. Introduction Sports are an important part of student life. Sports help us to stay active and healthy. They also teach us teamwork, discipline and confidence. For this project, our group collected information from students about their favourite sports. We went to students and asked them questions directly. I personally collected data from 12 students, including 6 boys and 6 girls. The students gave different answers such as Volleyball, Cricket, Frisbee, Badminton, Football, Ludo, Chess and Tracking. This project helped me understand the sports choices of students and also gave me experience of collecting data.

OBJECTIVES & METHODOLOGY

OBJECTIVES

The main goals of our sports research initiative focus on understanding preferences and gathering reliable baseline metrics:

- To determine which sports are most popular among students
- To compare athletic interest trends between boys and girls
- To calculate total student selectors for each individual sport
- To present complex raw figures in a clean, simple layout
- To build foundational data gathering and analysis skills

METHODOLOGY

Data Collection: Primary data was collected directly from 20 boys by asking them about their preferred sports

Sample: Boys = 20; Total = 20 students.

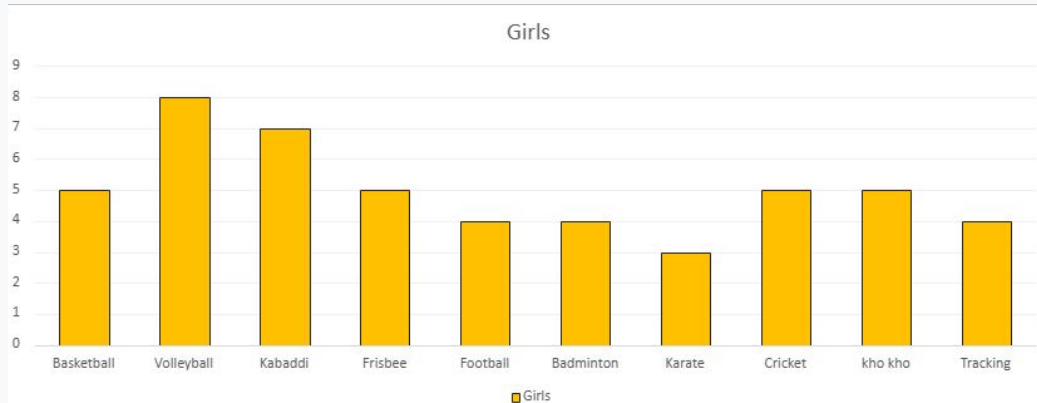

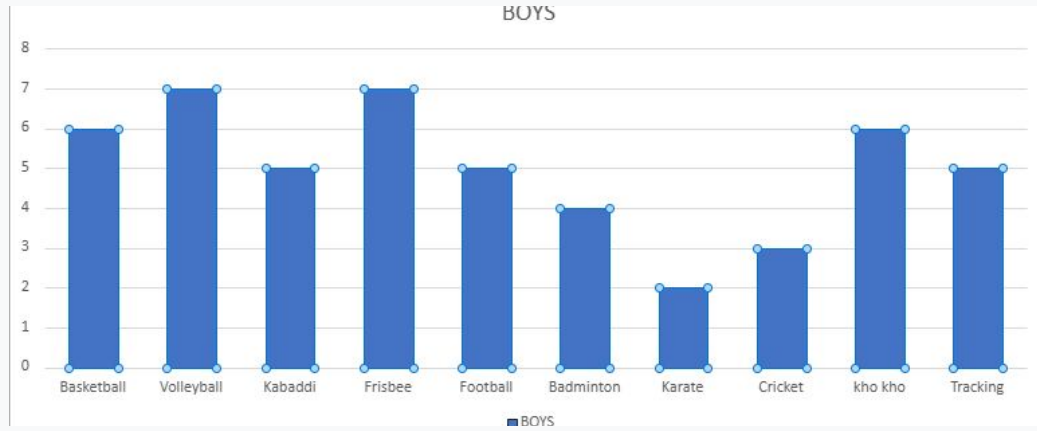

Method: Direct interaction with students.

Data Analysis: The responses were organized according to sports preference and represented through graphs.

4. Graphs & Visualization

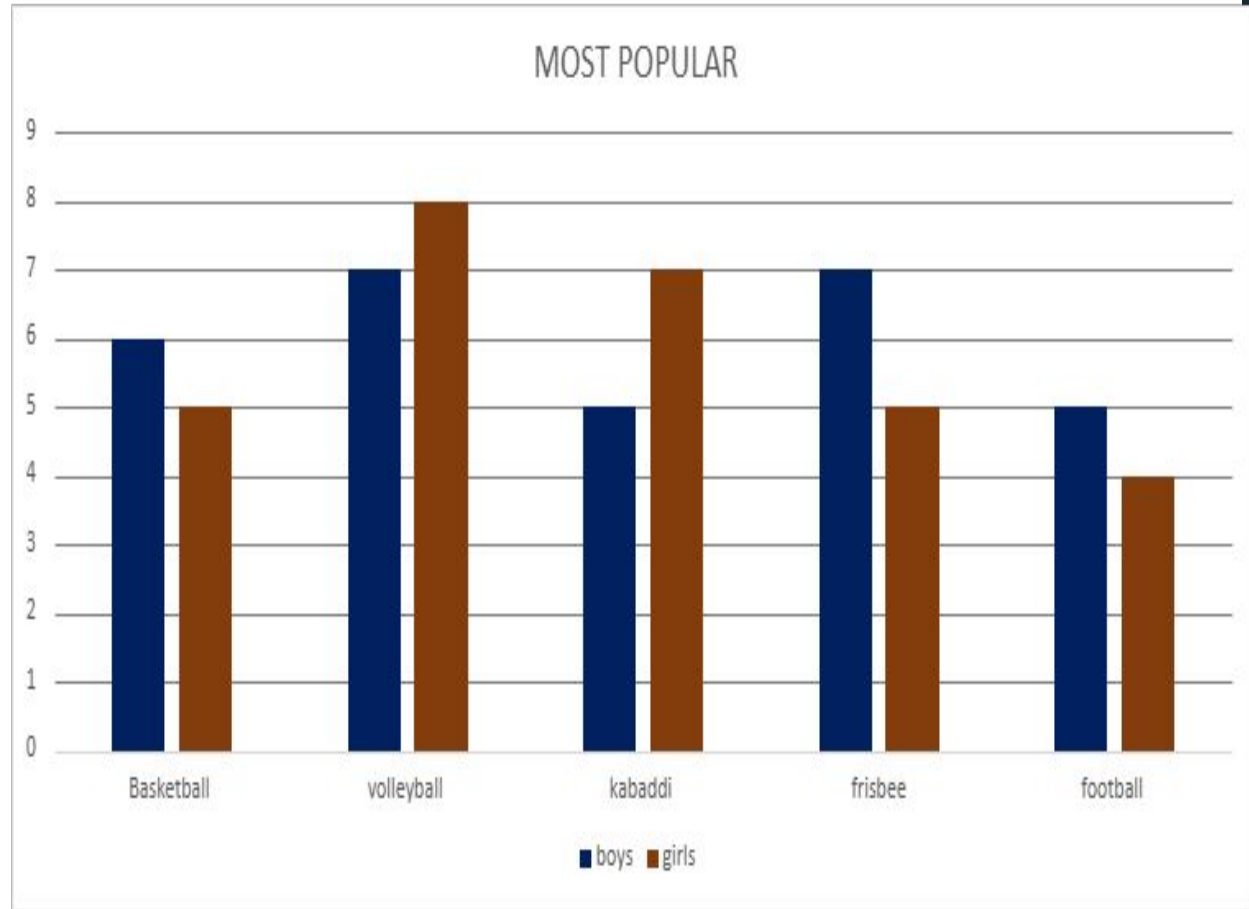

We plotted detailed graphs using the data collected from both boys and girls.

These visual tools make it much easier to compare athletic preferences and quickly identify which sports are most or least popular among students.

Most popular game

most popular		
	boys	girls
Basketball	6	5
volleyball	7	8
kabaddi	5	7
frisbee	7	5
football	5	4
total	30	29

5.FINDINGS AND NTERPRETATION

Students have different sports preferences.

Volleyball, Cricket, Frisbee and Badminton were the most selected.

Cricket was selected by 2 boys.

Tracking were selected by girls.

Volleyball, Frisbee and Badminton were selected by both boys and girls.

No single sport was selected by a majority of students

7. My Individual Contribution

I prepared the PowerPoint presentation for our group project.

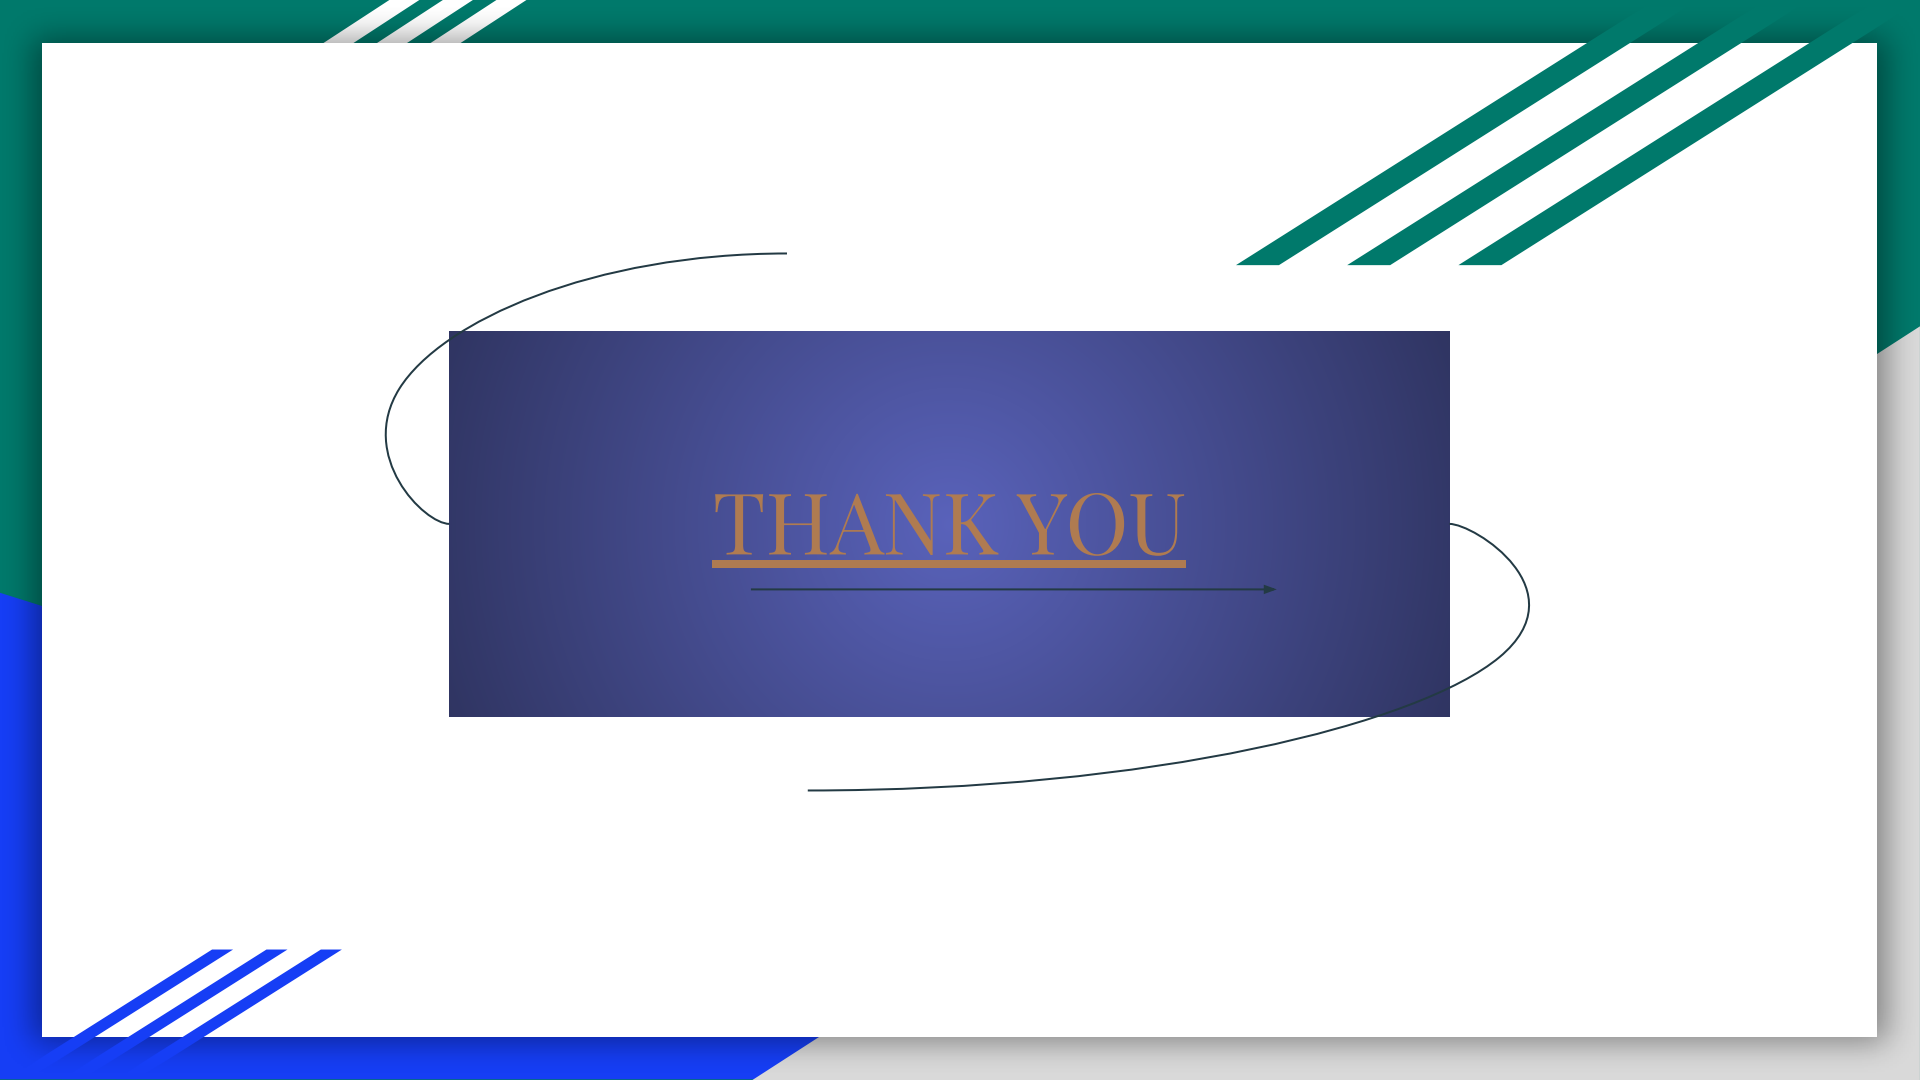

I organized the content and arranged the information clearly so that our findings could be presented in a simple and effective way.

This was my contribution to the group project.

APPENDICES (QUESTIONS)

WHICH GAME YOU PLAY ?

WHY YOU DON'T PLAY ANY GAME? TELL ME
PROBLEM.

THANK YOU
